updmap will read the following updmap.cfg files (in precedence
order):
  /usr/local/texlive/2016/texmf-config/web2c/updmap.cfg
  /usr/local/texlive/2016/texmf-dist/web2c/updmap.cfg
updmap may write changes to the following updmap.cfg file:
  /usr/local/texlive/2016/texmf-config/web2c/updmap.cfg
dvips output dir: "/usr/local/texlive/2016/texmf-var/fonts/map/
dvips/updmap"
pdftex output dir: "/usr/local/texlive/2016/texmf-var/fonts/map/
pdftex/updmap"
dvipdfmx output dir: "/usr/local/texlive/2016/texmf-var/fonts/map/
dvipdfmx/updmap"

```

```

updmap is creating new map files
using the following configuration:
  LW35 font names           : URWkb (/usr/local/texlive/2016/
texmf-dist/web2c/updmap.cfg)
  prefer outlines           : true (/usr/local/texlive/2016/
texmf-dist/web2c/updmap.cfg)
  texhash enabled           : true
  download standard fonts (dvips) : true (/usr/local/texlive/2016/
texmf-dist/web2c/updmap.cfg)
  download standard fonts (pdftex) : true (/usr/local/texlive/2016/
texmf-dist/web2c/updmap.cfg)
  jaEmbed replacement string : noEmbed (/usr/local/texlive/
2016/texmf-config/web2c/updmap.cfg)
  jaVariant replacement string : -04 (/usr/local/texlive/2016/
texmf-config/web2c/updmap.cfg)
  scEmbed replacement string  : arphic (/usr/local/texlive/
2016/texmf-dist/web2c/updmap.cfg)
  tcEmbed replacement string  : arphic (/usr/local/texlive/
2016/texmf-dist/web2c/updmap.cfg)
  koEmbed replacement string  : baekmuk (/usr/local/texlive/
2016/texmf-dist/web2c/updmap.cfg)
  create a mapfile for pxdvi  : false (default)

```

```

Scanning for LW35 support files [ 3 files]
